baclofen carisoprodol chlorzoxazone cyclobenzaprine dantrolene metaxalone methocarbamol orphenadrine tizanidine	<p>After considering the evidence of safety, efficacy and special populations for the treatment of spasticity, I move that tizanidine and baclofen are efficacious and safe. For the indication of muscular skeletal relaxation methocarbamol, cyclobenzaprine, metaxalone, orphenadrine are safe and efficacious. The committee finds that carisoprodol is subject to abuse and it recommends carisoprodol not be covered. Chlorzoxazone and dantrolene should be non-preferred on the Washington Preferred Drug List.</p> <p>Skeletal muscle relaxants and drugs used to treat spasticity can be subject to therapeutic interchange within their indicated subclass on the Washington preferred drug list.</p> <p>Motion: Gaster 2nd: Iltz</p>	June 15, 2016	Yes Smith Bowman	Yes Harvey Sanderson	Passed unanimous
