Primary caries prevention intervention as offered by medical provider: topical fluoride application delivered by non-dental health professional

**Metric Information**

**Metric description:** The percentage of Medicaid beneficiaries, 5 years of age and younger, who received a topical fluoride application by a professional provider (non-dental medical provider) during any medical visit.

**Metric specification version:** Washington Health Care Authority, 2018.

**Data collection method:** Administrative only.

**Data source:** ProviderOne Medicaid claims/encounter and enrollment data.

**Identification window:** Measurement year.

**Claim status:** Include only final paid claims or accepted encounters in metric calculation.

**Direction of quality improvement:** Higher is better.

**URL of specifications:** N/A

**DSRIP Program Summary**

**Metric utility:** ACH Project P4P ■ ACH High Performance □ DSRIP statewide accountability □

**ACH Project P4P – Metric results used for achievement value:** Single metric result.

**ACH Project P4P – improvement target methodology:** improvement over self (1.9% improvement over reference baseline performance).

**ACH regional attribution:** Residence in the ACH region for 7 out of 12 months in the measurement year.

**Denominator:**
*Data elements required for denominator:* Medicaid beneficiaries, aged 5 and younger as of the last day of the measurement year, meeting the above eligibility criteria.

*Required exclusions for denominator.*
- Eligible population exclusions are listed in the eligible population table above.
- Metric specific exclusions:
  - Beneficiaries in hospice care.

*Deviations from cited specifications for denominator.*
- None.

**Numerator:**
Beneficiaries must qualify for inclusion in the denominator to be eligible for inclusion in the numerator.

*Data elements required for numerator:* Medicaid beneficiaries who received at least one topical fluoride service by any professional, non-dental provider during a visit in the measurement year.
- Professional, non-dental provider is defined as a servicing/rendering provider that is not included in the NUCC maintained Provider Taxonomy Codes value set.

*Value sets required for the numerator:*

Primary caries prevention intervention as offered by medical provider: topical fluoride application delivered by non-dental health professional

Required exclusions for numerator.
- None

Deviations from cited specifications for numerator.
- None

Version Control

July 2018 release: The Primary Caries Prevention Intervention measure has undergone significant revision to match the Washington health care context. This update includes: (1) matching current billing practices (non-covered codes removed); (2) defining non-dental health professionals; and (3) revised ACH regional attribution methodology to seven out of twelve months residency.

A prior version of this metric specified the inclusion of services that occurred during a primary care or well/ill child visit. The metric criteria is now broadened to include all topical fluoride applications provided by any non-dental professional provider (nurse practitioners, physician assistants, family practitioners, pediatricians, nurses, medical assistants) during a medical visit.

January 2019 update: The specification was updated to include a metric specific exclusion of beneficiaries in hospice care. This updated was made to maintain consistency with HEDIS® metric requirements. This change is expected to make a minimal or no impact on metric results.

August 2019 update: No substantive changes were made to the DSRIP Metric Details.
