WISe At-A-Glance

WISe Screened, Served, and Proxy Populations

- Demographic and Geographic Characteristics
- Behavioral Health and Services
- Social and Health Services
- Functional Proxy Indicators

WISe Outcomes

- Child and Adolescent Needs and Strengths (CANS) at Intake and 6-Month Follow-Up

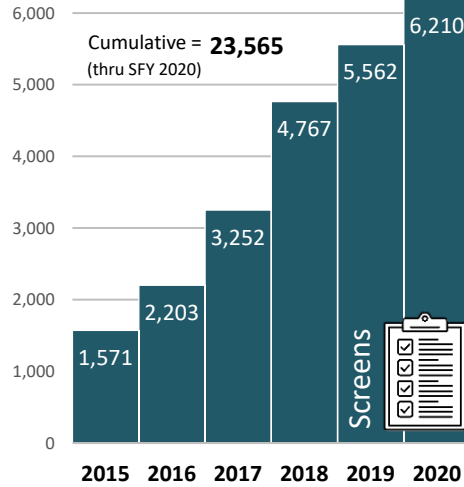

WISe Implementation Progress

# WISE At-A-Glance

**Number of Youth Served in WISE, by SFY**

**Number of WISE Screens, by SFY**

NOTES: Youth counts unduplicated within SFY. Screen counts duplicated.

**Total Average Monthly Service Hours, SFY 2020**

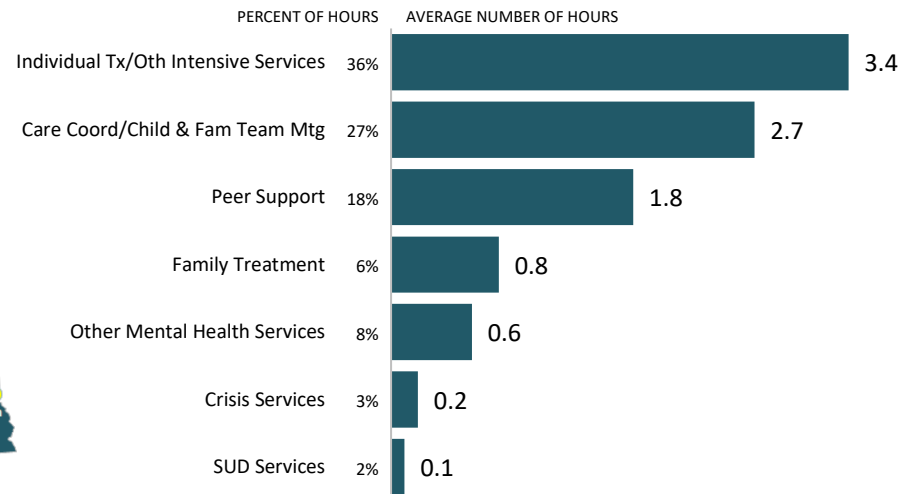

**Service Hours by Location, SFY 2020**

**WISE PARTICIPANTS**

**Service Hours by Type of Service, SFY 2020**

**WISE PARTICIPANTS**

NOTES: WISE participants N=5,954. Numbers above show the average number of hours per service month.

**WISE Service Providers as of February 2021**

(Services provided in community settings regardless of office location)

# WISe Screened, Served, and Proxy Populations

DATA SOURCE: List of youth screened and referral outcomes from BHAS data, list of youth receiving WISe and in WISe proxy from administrative data (based on service encounters). Characteristics of all three populations from administrative data. Number of youth receiving WISe services may be underestimated due to data completeness issues.

NOTES: Table presents characteristics of youth screened for WISe and receiving WISe Services in time period identified as well as those in the WISe Proxy in SFY 2015. For youth screened more than once for WISe services, type of services screened into reflects the following hierarchy: (1) WISe; (2) CLIP/BRs; (3) Outpatient/Other. For youth screened for WISe, index month is month of screen (or, in the case of multiple screens, first screen in the date range resulting in that type of WISe services). For youth receiving WISe services, index month is the first month in the date range in which youth received services (even if services began in a prior fiscal year). For youth in WISe proxy, index month is first month of Medicaid eligibility in SFY 2015. Region information is displayed using current Behavioral Health Organization (BHO) and Integrated Managed Care (IMC) boundaries. Region assignment is based on location of residence in index month for proxy, and region of screening or service for screened and served populations. Due to data lag, a small number of youth screened and/or served could not yet be linked with administrative data. <sup>1</sup>In order to protect the privacy of individuals, cells in this data product that contain small numbers from 1 to 10 are not displayed. <sup>2</sup>Some additional cells with n>10 have been suppressed to ensure that cells with small numbers cannot be recalculated.

DATA SOURCE: Behavioral Health Assessment System (BHAS).

NOTES: These statistics reflect change over time in actionable treatment needs and youth strengths as identified on the CANS Full Assessment, conducted at intake and at 6-month follow up, for youth participating in the WISe program. The sample includes youth who completed a CANS initial assessment between 07/1/2014 and 06/30/2020 and whose 6-month reassessment was available in BHAS as of 12/30/2020. Youth served in different regions at the intake and 6-month time point have been allocated to the region in which their 6-month CANS was completed. The table displays the proportion of children with clinically significant treatment needs at each time point, i.e. the clinician rated the item as a 2 (“need for action”) or 3 (“need for immediate or intensive action”) instead of a 0 (“no current need”) or 1 (“watchful waiting/prevention”). The top five treatment needs within each domain, by proportion at intake/initial assessment, are shown. The top five ranking reflects the statewide ranking and may not reflect item rank order for each region. A decline at the time of the 6-month reassessment represents improvement for these measures, i.e., a decrease in the proportion of children and youth with clinically significant treatment needs in these areas. TA (Transition to Adulthood) items are only administered to youth age 15+. The top five strengths, by growth over time, are shown. An increase at the time of the 6-month reassessment represents improvement for these measures, i.e., an increase in the proportion of children and youth with identified strengths that can be used in treatment planning to facilitate recovery. Strengths are identified when the clinician rated a strengths item as a 0 (“significant strength”) or 1 (“some strength”) instead of a 2 (“potential strength”) or 3 (“no strength identified at this time”). <sup>1</sup>In order to protect the privacy of individuals, cells in this data product that contain small numbers from 1 to 10 are not displayed. <sup>2</sup>Some additional cells with n>10 have been suppressed to ensure that cells with small numbers cannot be recalculated. Regions reflect current HCA managed care regions.
