Most or moderately effective FDA-approved contraception methods: female sterilization, contraceptive implants, intrauterine devices or systems, injectables, oral pills, patch, or ring.

Eligible women had a live birth in the first nine months of the measurement year, were continuously enrolled in Medicaid or CHIP with medical or family planning benefits from the date of delivery to 90 days postpartum, and were in the specified age range as of December 31 of the measurement year. **Excludes** women who were eligible for both Medicaid and Medicare; women who had full third party liability; women with deliveries that did not end in a live birth.

Plan listed is the Medicaid managed care plan that the woman was enrolled in from delivery through 90 days postpartum. Women may have been enrolled in more than one plan during the year. **Uncategorized** indicates that a woman had more enrollment months in managed care than in fee-for-service status from month of delivery through 90 days postpartum but was not enrolled in a single managed care plan throughout that time. Primary Care Case Management (PCCM) is included in Medicaid Fee for Service. **Rates** calculated from small numbers may be unstable and may fluctuate widely. Caution should be used when interpreting rates based on small numbers. ****** = suppressed due to small numbers or for secondary suppression.

Most or moderately effective FDA-approved contraception methods: female sterilization, contraceptive implants, intrauterine devices or systems, injectables, oral pills, patch, or ring.

Eligible women had a live birth in the first nine months of the measurement year, were continuously enrolled in Medicaid or CHIP with medical or family planning benefits from the date of delivery to 90 days postpartum, and were in the specified age range as of December 31 of the measurement year. **Excludes** women who were eligible for both Medicaid and Medicare; women who had full third party liability; women with deliveries that did not end in a live birth.

Race/ethnicity categories are mutually exclusive. Hispanic women may be of any race. **Rates** calculated from small numbers may be unstable and may fluctuate widely. Caution should be used when interpreting rates based on small numbers. ** = suppressed due to small numbers or for secondary suppression.

Measure CCP: Contraceptive Care -- Postpartum Women Ages 15-20
Percentage Who Were Provided a Most Effective or Moderately Effective FDA-approved Method of Contraception
Within Ninety Days of Delivery
By Year and Race/Ethnicity (Not Mutually Exclusive)

Most or moderately effective FDA-approved contraception methods: female sterilization, contraceptive implants, intrauterine devices or systems, injectables, oral pills, patch, or ring.

Eligible women had a live birth in the first nine months of the measurement year, were continuously enrolled in Medicaid or CHIP with medical or family planning benefits from the date of delivery to 90 days postpartum, and were in the specified age range as of December 31 of the measurement year. **Excludes** women who were eligible for both Medicaid and Medicare; women who had full third party liability; women with deliveries that did not end in a live birth.

Plan listed is the Medicaid managed care plan that the woman was enrolled in from delivery through 90 days postpartum. Women may have been enrolled in more than one plan during the year. **Uncategorized** indicates that a woman had more enrollment months in managed care than in fee-for-service status from month of delivery through 90 days postpartum but was not enrolled in a single managed care plan throughout that time. Primary Care Case Management (PCCM) is included in Medicaid Fee for Service. **Rates** calculated from small numbers may be unstable and may fluctuate widely. Caution should be used when interpreting rates based on small numbers. ****** = suppressed due to small numbers or for secondary suppression.
