Disclaimer

This companion guide for the NCPDP D.0 Encounters transaction has been created for use in conjunction with the standard Implementation Guide. It should not be considered a replacement for the Implementation Guide, but rather used as an additional source of information. The companion guide contains data clarifications derived from specific business rules that apply exclusively to Medicaid processing for Washington State. The guide also includes useful information about sending and receiving data to and from the ProviderOne system.

Introduction

NCPDP is a registered trademark of the National Council for Prescription Drug Programs (NCPDP), Inc., Versions 1.2 and D.0 and their predecessors include proprietary material that is protected under the U.S. Copyright Law, and all rights remain with NCPDP.

- NCPDP Version 1.2 defines the data structure and content of batch pharmacy transmissions only.
- NCPDP Version D.0 defines the data structure and content of single Point-of-Sale (POS) transmissions only.

These specifications cover the minimum required fields (mandatory) per the NCPDP Versions 1.2 and D.0 standards as well as the required fields needed for the State of Washington Health Care Authority encounter claims processing.

The Administrative Simplification provisions of the Health Insurance Portability and Accountability Act of 1996 (HIPAA, Title II) includes requirements that national standards be established for electronic health care transactions, and national identifiers for providers, health plans, and employers. This requires Washington State Health Care Authority (HCA) to adopt standards to support the electronic exchange of administrative and financial health care transactions between covered entities (health care providers, health plans, and healthcare clearinghouses).

The intent of these standards is to improve the efficiency and effectiveness of the nation's health care system by encouraging widespread use of electronic data interchange standards in health care. The intent of the law is that all electronic transactions for which standards are specified must be conducted according to the standards. These standards were not imposed arbitrarily but were developed by processes that included significant public and private sector input.

Encounters are not HIPAA named transactions and the NCPDP Version D.0 Implementation Guide was used as a foundation to construct the standardized HCA encounter reporting process.

Document Purpose

Companion Guides are used to clarify the exchange of information on NCPDP Encounter transactions between the HCA ProviderOne system and its trading partners. HCA defines trading partners as covered entities that either submit or retrieve NCPDP batch transactions to and from ProviderOne.

This Companion Guide provides information related to electronic submission of NCPDP Encounter Transactions to HCA by approved trading partners.

This Companion Guide is intended for trading partner use in conjunction with the NCPDP Batch Standard Implementation Guide Version 1 Release 2 The NCPDP Implementation Guides can be accessed at http://www.ncpdp.org/.

Intended Users

Companion Guides are intended to be used by members/technical staff of trading partners who are responsible for electronic transaction/file exchanges.

Relationship to NCPDP Implementation Guides

Companion Guides are intended to supplement the NCPDP Implementation Guides for NCPDP transactions. Rules for format, content, and field values can be found in the Implementation Guides. This Companion Guide describes the technical interface environment with HCA, including connectivity requirements and protocols, and electronic interchange procedures. This guide also provides specific information on data elements and the values required for transactions sent to or received from HCA.

Companion Guides are intended to supplement rather than replace the standard Implementation Guide for each transaction set. The information in these documents is not intended to:

- Modify the definition, data condition, or use of any data element or segment in the standard Implementation Guides.
- Add any additional data elements or segments to the defined data set.
- Utilize any code or data values that are not valid in the standard Implementation Guides.
- Change the meaning or intent of any implementation specifications in the standard Implementation Guides.

Technical Environment

Communication Requirements

This section will describe how trading partners can send NCPDP Transactions to HCA using:

- Secure File Transfer Protocol (SFTP)

Testing Process

Completion of the testing process must occur prior to submitting electronic transactions in production to ProviderOne. Testing is conducted to ensure the following levels of NCPDP compliance:

1. Level 1 – Syntactical integrity: Testing of the EDI file for valid segments, segment order, element attributes, testing for numeric values in numeric data elements, validation of X12 or NCPDP syntax, and compliance with X12 and NCPDP rules.
2. Level 2 – Syntactical requirements: Testing for NCPDP Implementation Guide-specific syntax requirements, such as limits on repeat counts, used and not used qualifiers, codes, elements and segments. It will also include testing for NCPDP HIPAA required or intra-segment situational data elements.

Additional testing may be required in the future to verify any changes made to the ProviderOne system. Changes to the ANSI formats may also require additional testing. Assistance is available throughout the testing process.

Trading Partner Testing Procedures

1. ProviderOne companion guides and the trading partner enrollment package are available for download via the web at https://www.hca.wa.gov/CG_HIPAA

2. The Trading Partner completes the Trading Partner Agreement and submits the signed agreement to DSHS.

   Submit to: HCA HIPAA EDI Department
   626 8th Avenue SE
   PO Box 45564
   Olympia, WA 98504-5564

   For Questions call 1-800-562-3022 extension ‘16137’

3. The trading partner is assigned a Submitter ID, Domain, Logon User ID and password.
4. The trading partner submits all NCPDP test files through the Secure File Transfer Protocol (SFTP).

- SFTP URL: ftp.waproviderone.org

5. The trading partner downloads acknowledgements for the test file from the ProviderOne SFTP site.
6. If the ProviderOne system generates a positive acknowledgment, the file is successfully accepted. The trading partner is then approved to send NCPDP Encounter files in production.
7. If the test file generates a negative acknowledgment, then the submission is unsuccessful, and the file is rejected. The trading partner needs to resolve all the errors that are reported on the negative acknowledgment and resubmit the file for test. Trading partners will continue to test in the testing environment until they receive a positive acknowledgment.

Who to contact for assistance

- Email: HIPAA-help@hca.wa.gov
  - All emails result in the assignment of a Ticket Number for problem tracking
- Information required for initial email:
  - Name
  - Phone Number
  - Email Address
  - 7 Digit Domain/ProviderOne ID
  - Transaction you are inquiring about
  - File Name
  - Detailed description of concern
- Information required for follow up call(s):
  - Assigned Ticket Number

Set-up, Directory, and File Naming Convention

SFTP Set-up

Trading partners can contact HIPAA-Help@hca.wa.gov for information on establishing connections through the FTP server. Upon completion of set-up, they will receive additional instructions on FTP usage.

SFTP Directory Naming Convention

There would be two categories of folders under Trading Partner's SFPT folders:

1. **TEST – Trading Partners should submit and receive their test files under this root folder**

2. **PROD – Trading Partners should submit and receive their production files under this root folder**

Following folder will be available under TEST/PROD folder within SFTP root of the Trading Partner:

'NCPDP_Inbound' - This folder should be used to drop the Inbound files that needs to be submitted to HCA

'NCPDP_Ack' - Trading partner should look for acknowledgements to the files submitted in this folder. Custom error report will be available for all the files submitted by the Trading Partner

'NCPDP_Outbound' – X12 outbound transactions generated by HCA will be available in this folder

'NCPDP_Error' – Any inbound file that is not HIPAA/NCPDP compliant or is not recognized by ProviderOne will be moved to this folder

Folder Structure will appear as:

- **PROD**
  - **NCPDP Inbound**
  - **NCPDP Error**
  - **NCPDP Outbound**
  - **NCPDP_Ack**
- **TEST**
  - **NCPDP Inbound**
  - **NCPDP Error**
  - **NCPDP Outbound**
  - **NCPDP_Ack**

File Naming Convention

The HIPAA Subsystem Package is responsible for assisting ProviderOne activities related to Electronic Transfer and processing of Health Care and Health Encounter Data, with a few exceptions or limitations.

NCPDP files are named:

For Inbound transactions:

NCPDP.<TPId>.<datetimestamp>.<originalfilename>.<dat>

Example of file name: NCPDP.101721500.122620072100_P_1.dat

- <TPId> is the Trading Partner Id
- <datetimestamp> is the Date timestamp
- <originalfilename> is the original file name which is submitted by the trading partner.

Transaction Standards

General Information

NCPDP standards are specified in the Implementation Guide for each mandated transaction and modified by authorized Addenda,

An overview of requirements specific to the NCPDP batch transactions can be found in the NCPDP Batch Standard and Batch Implementation Guide Version 1 Release 2. Implementation Guides contain information related to:

- Format and content of batch and transaction group
- Format and content of the header, detail and trailer segments specific to the batch
- Code sets and values authorized for use in the transaction
- Allowed exceptions to specific transaction requirements

Transmission sizes are limited based on two factors:

- Number of Segments/Records allowed by NCPDP Standards
- HCA file size limitations

HCA limits a file size to 100 MB through SFTP.
